

SG 2 SDM Training

- We are developing three different prototypes of posters that can be used both in the implementation process and the maintenance process of SDM. Furthermore, work is being done on the creation of the toolbox, in which SDM:hapsere/ SDM:häppchen will also become an integrated part. Both topics will be presented at our Project Partner meeting in May. In Germany, we have finished the Teach The Teacher (TTT) workshops at UKSH, Kiel and started coaching physicians. The TTT workshops at Helios hospital in Schleswig and Malteser hospital in Flensburg are planned for April and May.

warm greetings **Anja and Dorte**

SG 3 Decision Aids

- German Parkinson's Decision Aid in Denmark:
OUH's neurology department is interested in testing the German decision aid for advanced Parkinson's disease. As that specific decision aid is already a couple of years old, we first conducted an analysis of currentness. This has revealed that new options are available that need to be integrated. The PtDA will receive an update in the next two months. After that we will translate the texts to Danish. The videos will be kept but subtitled and / or lip-synched in Danish.

warm greetings **Annemarie and Felix**

SG 4 Patient Activation

- Visual Identity: The comic figures that have accompanied us since the start of the DAILY SDM project have proved to be suitable SDM 'mascots'. We are now actively expanding our SDM crew with additional characters in order to appeal to and involve as many people as possible.

warm greetings **Antje and Julia**

SG 5 SDM Concept

- SDM Concept: What are we working on? Since our Project Partner Meeting in Kiel the 20th of February, we have evaluated the question cards, and worked on planning a workshop for you at the Project Partner Meeting the 23rd of May. As part of the workshop we will present the results from the SDM Question Cards you filled out – so you can look forward to learning how your DAILY colleagues understand SDM.
In the SDM Concept workshop at the Project Partner Meeting in May we want to dive even deeper into the concept of SDM together and take a first look at the actual implementation. This involves questions such as:
 - What is our shared understanding of SDM in DAILY SDM?
 - How do we prepare for an SDM implementation?

We look forward to hearing your perspectives and learning from your SDM experiences!

warm greetings **Anja and Mette**
